disappeared: all methods saving pixmaps (`writePN`

internal images may or may not contain an alpha
e PDF.

e classes have been extended with properties that
lowing list:

ool

nteger containing the number of bytes of one line

r containing the number of bytes per pixel

es – integer containing the number of bytes used t

eviceRGB, 4 = `DeviceCMYK`)

– string naming the colorspace, one of `DeviceGra`

ce = `Colorspace.name`

ap.alpha = `Colorspace.nbytes`

n

equire an alpha parameter, we assume `alpha = F`

List

age's mediabox.

isExternal	uri	Links	Outlines
True	Does not start with <code>file://</code> (may instead be <code>http://</code> , <code>https://</code> , <code>mailto:</code> , <code>ftp://</code> a probably incomplete list)	Generate a <code>launch</code> .	Generate a <code>launch</code> . Page must be <code>-1</code> .
True	None (empty)	Should not happen and will be ignored.	Generate a dummy outline entry. Page must be <code>-1</code> .
False	May contain a named destination or a 1-based page number (however, format varies by document type: e.g. <code>#n,x,y</code> or <code>#n</code> in case of PDF.	Generate a <code>goto</code> . If PDF and <code>uri</code> is in page number format, use page number to construct a direct destination. If coordinates <code>x,y</code> are provided, use them as <code>linkDest.lt</code> . If not a PDF or a different format, assume a named destination with <code>uri</code> as its name.	The outline structure contains <code>page</code> (0-based) for all document types. We use this (and potentially <code>x,y</code> coordinates) to construct the destination.

Configuration Changes

There is a new file `mupdf/include/mupdf/fitz/config.h` to be used for MuPDF generation. It contains `#define` statements for switching off unwanted features. Our recommendations are contained in the file version that follows.

Of course, everyone using MuPDF is free to decide what to generate for himself – PyMuPDF should work in any case. In so far the following is just a recommendation. It does, however, have an impact on the Windows binaries we generate – our decisions are “burnt in” into them.

Basically, we disable all but the standard fonts as before in v1.9.2.

You may disable JavaScript features, too, because they are not used in PyMuPDF. This will save you another 300 KB binary file size.
